FuturePowerAIPlus — Complete Verified Source Set

Generated from the Windows two-model project. renderer/local-ai.js was replaced with the corrected version and rechecked for JavaScript syntax and invalid /x regex syntax.

local-ai.js

Source: renderer/local-ai.js

```
/*
 * FuturePowerAIPlus - Dual Local AI Engine
 *
 * Model A: LFM2.5-350M
 *   Fast everyday chat, short explanations and simple tasks.
 *
 * Model B: Qwen2.5-Coder-3B-Instruct
 *   Coding, harder mathematics, technical questions and longer answers.
 *
 * Runtime:
 *   1. Try WebGPU first.
 *   2. If WebGPU is unavailable/fails, try WASM/CPU.
 *   3. Never crash the webpage.
 *   4. Expose status through window.localAIStatus().
 *
 * Models are downloaded and cached locally by Transformers.js.
 */

const KNOWLEDGE={
  gravity:"Gravity is the mutual attraction between masses. Newton's law: F = G·m■·m■ / r² — every mass pulls every other mass. Earth pulls you (9.8 m/s² downward); you pull Earth back, just imperceptibly. Einstein reframed it: mass curves spacetime, and objects follow those curves.",
  photosynthesis:"Photosynthesis is how plants make food: 6CO■ + 6H■O + sunlight → C■H■■O■ + 6O■. Chlorophyll in leaves captures light energy, splits water, and fixes carbon dioxide into glucose, releasing the oxygen we breathe.",
  "black hole":"A black hole is a region where gravity is so strong that escape velocity exceeds light speed. The event horizon marks the point of no return. Nothing — not even light — escapes. Stellar-mass ones form when massive stars collapse.",
  dna:"DNA (deoxyribonucleic acid) is the molecule carrying genetic instructions. It's a double helix of nucleotides (A, T, G, C); A pairs with T, G with C. Your genome is the recipe book for building and running you.",
  "big bang":"The Big Bang is the origin of our universe ~13.8 billion years ago: space itself expanded from an extremely hot, dense state. Evidence: cosmic microwave background radiation and the expansion of galaxies (Hubble's law).",
  evolution:"Evolution is change in populations over generations via variation and natural selection. Organisms best suited to their environment leave more offspring, so advantageous traits spread. Over deep time this produces new species.",
  "machine learning":"Machine learning is programming by example: instead of hand-writing rules, a model learns patterns from data. A neural network adjusts millions of weights to minimize error, enabling image recognition, translation and chat.",
  "quantum computing":"Quantum computing uses qubits, which can be 0 and 1 simultaneously (superposition) and can correlate (entanglement). This lets certain problems — factoring, simulation, search — be attacked in fundamentally new ways.",
  "solar system":"Our solar system: the Sun plus 8 planets — Mercury, Venus, Earth, Mars (rocky), then Jupiter, Saturn, Uranus, Neptune (gas/ice giants) — plus dwarf planets, moons, asteroids and comets.",
  internet:"The internet is a global network of networks using shared protocols (TCP/IP). Data is split into packets, routed across physical links — cables, fiber, satellites — and reassembled. The web is one service running on top of it.",
  inflation:"Inflation is the general rise in prices over time, usually measured by the CPI. Moderate inflation (~2%) signals a growing economy; high inflation erodes savings and purchasing power.",
  "water cycle":"The water cycle: the sun evaporates water → vapor rises and cools → condenses into clouds → falls as rain/snow → collects in oceans, rivers and groundwater → repeat.",
  "speed of light":"The speed of light in vacuum is exactly 299,792,458 m/s (~300,000 km/s). It's the cosmic speed limit for information and matter, and a core constant in relativity: E = mc²."

# FuturePowerAIPlus Offline - Two Model Edition

Windows desktop app with two local WebGPU models:

- **LFM2.5-350M** for fast everyday chat and short explanations.
- **Qwen2.5-Coder-3B-Instruct** for coding, harder math, technical tasks and detailed writing.

A lightweight task router automatically selects the model. The app tries local AI first, then uses the existing Cloudflare `/api/chat` endpoint only as a
n online fallback.

## Build

```bat
npm install
npm run start
```

Portable EXE:

```bat
npm run dist:portable
```

Installer:

```bat
npm run dist:installer
```

The first time each model is used, Transformers.js downloads its ONNX files and caches them locally. The model weights are intentionally not packaged ins
ide this ZIP.
```

MODEL_SETUP.txt

Source: MODEL_SETUP.txt

FuturePowerAIPlus Offline - TWO LOCAL MODELS

MODEL 1: FAST
onnx-community/LFM2.5-350M-ONNX
Use: normal chat, short explanations, quick summaries

MODEL 2: STRONG
onnx-community/Qwen2.5-Coder-3B-Instruct
Use: coding, harder mathematics, technical work, detailed summaries

The models are NOT included in this source ZIP. They download from Hugging Face the first time each model is needed and are then cached by Transformers.js in the desktop app.

Approximate storage: the 350M model is a few hundred MB in its q4 form. The 3B model is substantially larger, so allow several GB of free disk space for model cache and runtime data.

Internet is required only for the first model download unless the model cache has already been prepared. After both models are cached, local inference can work without internet, provided WebGPU is available.

If the 3B model cannot load because of GPU memory limits, the app automatically falls back to the 350M model.
